What is your particular expertise?
I specialize in cosmetic surgery and aesthetic treatments for the face and body. One of my most sought-out procedures is a "mommy makeover," which typically combines three or more procedures, including a tummy tuck, breast augmentation/breast-lift/breast reduction, Brazilian butt-lift and/or Lipo 360. Nonsurgically, I specialize in facial contouring using dermal fillers.

How do you integrate groundbreaking technology and techniques into your practice?
We deliver the highest level of aesthetic care by leveraging the latest techniques with an artistic touch. We use the most up-to-date technology offered, such as Coolsculpting Elite®, which is the world's No. 1 noninvasive fat-reduction procedure.

**What are the most common procedures your clients choose when getting ready for spring and summer?**
We believe summer bodies are made in the winter. Breast augmentation, Coolsculpting Elite®, tummy tucks and liposuction are among the most popular procedures when gearing up for the summer.

Before choosing your practice, what should a client know about you and your team?
I am one of very few plastic surgeons to complete a cosmetic and aesthetic surgery fellowship through The Aesthetic Society. In addition to my fellowship, I am constantly perfecting my skills by attending conferences and learning the newest surgical and nonsurgical techniques from pioneers in the field.

What was the greatest lesson COVID-19 taught you and how did it improve your business?
My practice opened shortly after COVID-19 hit its peak. I am grateful that my team and I were able to deliver exceptional care to our patients throughout the pandemic. Being able to make patients happy, especially during a difficult time, is something I will cherish for the rest of my career.
